CONSENSUS is a distributed CPP group located by the EC. The objective is to develop a set of methods to effectively and efficiently promote competition, in the context of digital services. The project seeks to develop innovative business models and strategies to enable a more competitive environment in the digital service sector. The project's focus is on the digital service sector, including cloud computing, social networking, and mobile services. The project's goal is to promote competition and innovation in the digital service sector, leading to better outcomes for consumers and businesses. The project's approach is based on a form of consensus-building, where stakeholders work together to identify and address common goals and challenges.

CONSENSUS is developed by a group of partners from various European countries, including:

- IBM
- Nokia
- Orange
- Telefónica
- T-Systems
- Vodafone
- ZTE

The project is funded by the European Commission and is expected to be completed in early 2018. The project's website is available at www.consenus-project.eu.
